```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

S

```
The invention relates to an isolated polypeptide comprising a death CCC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NIDD (NGFR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell CC immunoglobulin class switching, in particular apoptosis within a cell. CC immunoglobulin class switching, in particular apoptosis within a cell. CC cmuridarum, C. pneumoniae, and C. psittaci or a mucleic acid encoding the CC CTDD DD protein is useful for detecting a Chlamydia infection. The CC cmuridarum, C. pneumoniae, and C. psittaci or a mucleic acid encoding the CC constaing a pathology caused by the oncogenic proteins and for treating bacterial infections by modulating the activity of bacterial for directina infections by modulating the activity of bacterial allergy.

                                                                                                                                                                                             discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases. The proteir is useful for treating immune-based gathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense therapy and gene therapy. The present sequence is human IRAK4 DD cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                        AAA09310-20 are novel genes isolated by SEREX screening from a renal cancer cell line 1973/10.4. The genes encode cancer associated antigen precursors. These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated with abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the nucleic acid molecule or expression product (or fragment) complexed with a human leukocyte antigen (HLA) molecule and determining the interaction between the agent and the nucleic acid molecule or the expression product as a determination of the disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human cancer associated antigen precursor DNA, clone NY-REN-64.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC detecting the association of the domain, with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent and CC spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell protein and B cell stress responses, responses to microbial infection and B cell cimmunoglobulin class switching, in particular apoptosis within a cell. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the crimention is useful for modulating the activity of noncogenic proteins, CC for treating a pathology caused by the oncogenic proteins and for CC treating bacterial infections by modulating the activity of bacterial for CC discovery of drugs that suppress infection and other diseases. The protein cCC with cell division, inflammatory diseases such as sepsis, fibrosis, allergy, the protein inflammatory diseases such as sepsis, fibrosis, cCC with cell division, inflammatory diseases. The invention is used in antisense ccc therapy and gene therapy. The present sequence is human IRAK4 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, complymerase chain reaction (PCR) primers, oligomers, and for chromosome complymerase chain reaction (PCR) primers, oligomers, and for chromosome complymerase chain recombinant production of (II). The complymerase chain rescribed in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in classifications in composible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and contains activity. ANS94564 represent novel human contains to assess biodiversity are the sequences of the invention.
                                                                                                                                                                                                                                                                      Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2000; 2000US-0540217.

that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NID6 (MGFR-interacting Death Domain), with a candidate binding agent and detecting the association of the domain and the candidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or chemical crosslinking, nuclear magnetic resonance (NWR), mass spectroscopy (MS) and FPA. The invention is useful for modulating the stress responses such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell. Antibody specifically reactive with CTDD DD of C. trachomatis, C. muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the invention is useful for modulating the activity of oncogenic proteins, for treating a pathology caused by the oncogenic proteins and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Reed JC, Godzi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating bacterial infections by modulating the activity of bacterial proteins. The protein and antibody specific for it are useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense arthritis, graft versus host disease. The invention is used in antisense

IRAK associate with activated IL-1, IL-18 and other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4 inhibitors are useful for treating inflammatory diseases such as pulmonary diseases and diseases of the airway (e.g., adult respiratory disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), pulmonary fibrosis, interstitial lung disease, asthma, chronic cough pulmonary fibrosis, interstitial lung disease, asthma, chronic cough

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse; interleukin-1 receptor associated kinase-4; IRAK-4; cytostatic; III; antibacterial; antiinflammatory; ophthalmological; vasotropic; OPD; chronic obstructive pulmonary disease; neuroprotective; chronic cough; adult respiratory disease syndrome; pulmonary fibrosis; asthma; ARDS; interstitial lung disease; allergic rhinitis; transplant rejection; autoimmune disease; rheumatoid arthritis; systemic lupus erythematosus; multiple sclerosis; diabette; cancer; solid tumour; lymphoma; stroke; cardiovascular disease; atherosclerosis; neurodegenerative disease; sepsis; osteoarthritis; rash; osteoporosis; psoriasis; dermatitis; inflammatory bowel disease; gout; Crohn's disease; ulcerative colitis; Behcet's syndrome; ankylosing spondylitis; II-1 receptor/Toll receptor; sarcoidosis; transgenic animal; ss.
inhibitors are useful for treating inflammatory diseases such as pulmonary diseases and diseases of the airway (e.g., adult respiratory disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), pulmonary fibrosis, interstitial lung disease, asthma, chronic cough or allergic rhinitis), transplant rejection, autoimmune diseases (e.g., rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis or diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), cardiovascular diseases (e.g., stroke and atherosclerosis), diseases of the central nervous system (e.g., neurodegenerative disease), CD14 mediated sepsis, osteoarthritis, osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAD10198
                                                                                                                                                                                      The present sequence is a cDNA encoding mouse interleukin (II)-1 receptor associated kinase (IRAK)-4. IRAK associate with activated II-1, II-18 and other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAD10198 standard; cDNA; 1542
                                                                                                                                                                                                                                                                                                                                             Novel human interleukin-1 receptor associated kinase polypeptide, useful for identifying modulators of the polypeptide for treating gout, asthma, allergic rhinitis, multiple sclerosis and skin cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dermatitis), inflammatory bowel disease (e.g., Crohn's disease and ulcerative colitis), Behcet's syndrome, ankylosing spondylitis, gout, sarcoidosis and ophthalmic diseases and conditions. The inhibitors of IRAK-4 activity or expression are used to inhibit signal transduction resulting from the activation of an interlaukin-1 receptor (IL-IR)/Toll receptor in a cell. They also inhibit the activation of a transcription factor that activates NFkappaB in the cell. IRAK-4 is used to create a nonhuman transgenic animal which is useful for testing the function of IRAK-4 in vivo, to generate models for the study of inflammatory disorders and conditions and for the development of potential treatments for IRAK-4-related inflammatory diseases and conditions. IRAK-4 sequences

The method is optionally performed by utilising oligonucleotides (III), where the biological sample cc from the patient is contacted with (III), detecting the amount of polynucleotide hybridised to (III) in the sample and comparing the amount of polynucleotide to a predetermined cut-off value and thereby determining cancer in a patient. (I), (II) or antigen-presenting cells expressing (II) is useful for stimulating and/or expanding T cells expecific for a tumour protein. The method comprises contacting T cells with one of the components under conditions to permit the stimulation and/or expansion of the cells. A composition comprising (I) is useful for stimulating an immune response in a patient and for inhibiting the cells isolated T cell population is useful for removing tumour cells from the biological sample and for inhibiting the development of cancer in a patient. AAS61460-AAS61874 represent novel human lung small cell cancer antigen coding seminates of the invention.
DNA encoding novel human diagnostic protein #12607.

                                                                                                                                                                                                                                                                                                                                                                               polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques CC for restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, dentification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and occording sequences of the invention.

CC Septiment of the however this patent did not appear in the printed as pecification, but was obtained in electronic format directly from WIPO as for which in the hombing the products or the printed of the products of the invention.
                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutatio responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID No 12607; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-639362/73.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  31-MAR-2000;

The invention relates to an isolated polypeptide comprising a death chomain (DD), death effector domain (DED) or NB-ARC domain. The invention is useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED or NIB-ARC domain in from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NIB-ARC domain in the candidate binding agent and detecting the association of the domain and the candidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or chemical crosslinking, nuclear magnetic resonance (NNA), mass spectroscopy (MS) and FPA. The invention is useful for modulating the level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell immunoglobulin class switching, in particular apoptosis within a cell. Antibody specifically reactive with CTDD DD GC. trachomatis, C. muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the invention is useful for modulating the activity of correction. The
           invention is useful for modulating the activity of oncogenic proteins, for treating a pathology caused by the oncogenic proteins and for treating bacterial infections by modulating the activity of bacterial proteins. The protein and antibody specific for it are useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases. The proteins useful for treating immune-based pathologies, pathologies associated

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or

 Primer sets for synthesizing full-length cDNAs defined in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

##X#X55555555555555555555555555555555
                                  CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary
CC to the complementary strand of a polynucleotide which comprises one of
CC the 5602 nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC oligonucleotide which comprises a 3'-end sequence complementary to a
CC polynucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in
CC the specification. The primers sets can be used in antisense therapy and
CC in gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH35893 represent human amino acid sequences; AAB92446 to
CC AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632
CC represent oligonucleotides, all of which are used in the exemplification
CC of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expressed in cancer tissues. ABB78993 to ABB79004 represent proteins cencoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Local Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a novel protein kinase. The nucleic acids and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase entragonists may also be used to down regulate kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, cardiomyopathies, strokes, renal failure, oxidative stress related disorders, chronic inflammatory bowel disease, oxidative stress related disorders, chronic inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic; immunosuppressive; cardiant; renal; antiinflammatory; antiasthmatic; dematological; antiidiabetic; antiinfertility; gene therapy; vaccine; immune disorder; cardiovascular disease; neurodegenerative disease; cancer; autoimmune disorder; stroke; inflammatory bowel disease; inflammatory pelvic disease; multiple sclerosis; psoriasis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                      The invention provides interleukin-1 receptor associated kinase-3 (IRAK3) proteins. The IRAK3 proteins are useful in drug screening, particularly for screening modulators of IRAK3. The modulator is useful for treating a disease or condition associated with interleukin-1 (II-1) family activity. It may also be used for manufacturing a medicament for the treatment of these diseases or conditions which include inflammations, post-operative septicemia autoimmune diseases (e.g. Crohn's disease, psoriasis, multiple sclerosis, transplant rejection or graft versus host disease) stroke, ischemia, reperfusion injury, acute respiratory disease syndrome, restenosis, atherosclerosis, AIDS (acquired immune deficiency syndrome), bone diseases (e.g. osteoporosis), cancer, Alzheimer's disease, rheumatoid arthritis, poor wound healing or asthma. The present sequence represents an IRAK3 protein encoding cDNA.
                                                                                                                             Sequence 2277 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IRAK3; interleukin-1 receptor associated kinase-3; drug screening; interleukin-1; IL-1; antiinflammatory; cytostatic; immunomodulator; immunosuppressive; vulnerary; anti-human immunodeficiency virus; HIV; nootropic; neuroprotective; antiarthritic; antiasthmatic; respiratory; osteopathic; vasotropic; antiarteriosclerotic; cerebroprotective; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin-1 receptor associated kinases, useful for screening drugs for treating diseases affected by interleukin-1 activity, e.g. inflammations or autoimmune diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2001-071072/08.
